The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAY73814-Y74252 represent protein fragments encoded by the human pancreatic tumor cDNA library derived expressed sequence tag (EST) sequences represented in AAZ52858-Z53014.
           This invention describes novel nucleic acid (cDNA) sequences (A) which have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy (A) are used (1) for
                                                                                             New nucleic acid sequences expressed in ovarian, tissues, and derived polypeptides, for treatment identification of therapeutic agents
                                                                                                                                                        WPI; 1999-591920/51.

(B) are used (i) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of the expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. ANY76505-Y76508 represent protein fragments encoded by the human ovarian tumor cDNA library derived EST fragments represented in AAZ77450-Z77572.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and AAB77789 represent sequences used in the exemplification of the

The products of the invention can be used in the stunned treatment of e.g. tumour metastasis, bacterial colonisation, susceptibility to and persistence of infection, microbial infections, AIDS, cystic fibrosis, chronic obstructive pulmonary disease, asthma, sinonasal inflammatory disease, inflammatory bowel disease, bronchitis, or Crohn's disease. The products can also be used for detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated mucous-associated polypeptide, zsig10 - used to develop products for treating e.g. tumour metastasis, microbial infections, cystic fibrosis, asthma, bronchitis or inflammatory bowel disease

                                                                                                                                                                                                                                                                                                                                                                                                     of hepatocytes to alleviate or treat liver diseases and pathologies such as fulminant liver failure caused by cirrhosis, liver damage caused by viral hepatitis and toxic substances. They can also be used to stimulate or promote liver regeneration, e.g. after surgery. They can also be used to prevent and heal damage to the lungs caused by various pathological states. They can be used to stimulate proliferation and differentiation and promote the repair of alveoli and bronchiolar epithelium to prevent, attenuate, or treat acute or chronic lung damage, e.g. emphysema, which results in the progressive loss of alveoli, and inhalation injuries, e.g. resulting from smoke inhalation and burns, that cause necrosis of the bronchiolar epithelium and alveoli. They can also be used to stimulate the proliferation and differentiation of breast tissue and could therefore be used to promote healing of breast tissue

                                                                                                                                                                                                                                                                                                                injury due to surgery, trauma or cancer. Antagonists can to treat hyperproliferative disorders, including cancer. particular hepatocellular carcinoma, osteoclastoma, breas or colon cancer. The products can also be used for detections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human growth factors also including huXAG-2 (see AAW37845) and huXAG-3 (see AAW37846). These proteins share homology with the XAG protein of xanopus laevis, which is involved in embryogenesis and is expressed in adult tissue. huXAG-1 is specifically found in cancerous colon cells and may therefore be a growth factor for colon cancer. huXAG-1 cDNA (see AAV19125) was isolated from a cDNA library derived from human colon cancer tissue. Vectors, host cells, antibodies, and screening methods for identifying agonists and antagonists of huXAG-1 are provided. HuXAG polypeptides are growth factors and can be used to stimulate proliferation of cells. They can be used to stimulate the proliferation as and methologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated human XAG growth factor(s) - used to develop for treating e.g. liver, lung or breast diseases or hyperproliferative disorders, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO9807749-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Fig 1; 141pp; English.

Its proteins can be used as nutritional sources or supplements. The proteins may also have cytokine functions, immune modulating functions, haematopoiesis regulating activity, activiny/inhibin regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity.

CC This sequence represents a human secreted protein of the invention.

CC The extended cDNAs (or genomic DNAs obtainable from them) may be used to CC prepare PCR primers and probes. These are useful for forensic matching or CC positive identification by DNA sequencing. They may also be used in CC alternative fingerprint identification techniques. Antibodies against the CC proteins encoded by the extended cDNAs are useful in identification of CC tissue types or cell species, as well as identifying tissue specific CC soluble proteins. The sequences can be used for chromosome mapping and CC identification of genes associated with hereditary diseases or drug CC response. Signal sequences from the cDNAs can be used in construction of CC secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter CC sequences. Some of the proteins may be useful in diagnosing and treating CC cardiovascular and neurodegenerative disorders, autoimmune diseases, and CC rheumatic diseases, embryogenic disorders, hypertension, renal injury, amino acidurias, hypoglycaemia, male rat infertility and myopathies.

PRO1025, PRO1030, PRO1097, PRO1107, PRO1111, PRO1132, PRO1182, PRO1184, PRO1281, PRO1281, PRO2198, PRO339, PRO834, PRO1317, PRO1170, PRO2094, PRO2145 OR PRO2198, PRO antagonists can be used to inhibit tumour cell growth. The PRO polypeptides and nucleotides are useful in the treatment, diagnosis and prevention of cancer. The antibodies and other cantinoses characterised by overexpression and/or activation of the amplified PRO genes. Exemplary conditions or disorders to be treated with such cantibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, glioblastomas, and various head and neck tumours), leukaemias and lymphoid malignancies, other disorders such as neuronal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunologic disorders. AAC58242 to AAC58366 represent PCR primers and hybridisation probes used in the isolation of the human PRO

         The invention describes the novel use of a protein found in breast cancer cell membranes (BCMP 7) for diagnosing, preventing and treating breast cancers. The peptide has cytostatic action and potential uses in gene therapy and in vaccines. The polypeptide, antisense nucleic acids or fusion proteins comprising and Green Fluorescent protein or the DsRc Fluorescent protein, antibodies specific for and/or nucleic acid are used for the prevention and/or treatment of breast cancer. This invention relates to a human growth factor polypeptide huXAG-1 also known as a colon cancer specific gene (CCSG). HuXAG-1 stimulates cell proliferation as a growth factor. The HuXAG-1 protein is useful for identifying compounds capable of enhancing or inhibiting cellular response induced by huXAG-1. The protein is also useful for stimulating proliferation of cells e.g. colon, breast, liver and lung cells, and hepatocytes. It is useful for alleviating or treating liver diseases and pathologies such as fulminant liver failure caused by cirrhosis, liver damage caused by viral hepatitis and toxic substances, for preventing and treating damage to the lungs caused by various pathological states and for promoting healing of breast tissue injury due to surgery, trauma or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer in a patient. The method for monitoring/assessing breast treatment in a patient and for the identification of metastatic, cancer cells in samples from a patient. This sequence is breast cancer cell associated protein 7 (BCMP 7), encoded by a gene loc chromosome 7p21.3, described in the method of the invention.
                                                                                                                                                                                     Claim 165; Fig 1;
                                                                                                                                                                                                                  Novel human growth factor polypeptide useful for diagnosing an treating colon cancer and liver diseases, to prevent and heal the lungs and for identifying modulators of therapeutic use -

HuXAG-1 and the identified antagonist are useful for treating cancer, in particular colon cancer. Detecting altered levels of huXAG- and its polynucleotides are useful for diagnosing or detecting cancer mammals. The gene encoding huXAG-1 is useful for monitoring human colorectal carcinoma. huXAG-1 nucleic acid molecules are also useful fermionsome identification. The present sequence represents the huXAG-1
          The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' and and the first being the first markets with intact 5' and and the first being the first markets with intact 5' and and the first markets with intact 5'.
                                                                                                                                                                                                      New nucleic acid that is a 5' expressed sequence tag (5' EST) is obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and diagnostic, forensic, gene therapy and chromosome mapping processors.
                                                                                                                                                                                                                                                                           N-PSDB;

They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                        AAX41094 to AAX41347 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAX12261 to AAX12514, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation;

       sequences, corresponding to human secreted proteins. AAY64651 to AAY6448 represent the EST-related proteins corresponding to AAZ42265 AAZ43052. The 5' ESTs can be used for producing secreted human gene products. They can be used to identify and isolate 5' untranslated regions (UTRs) and upstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, well as stability of mRNA. The ESTs are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTs calso be used in forensic procedures to identify individuals, or in diagnostic procedures to identify individuals having genetic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                thrombolytic activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.

                                                                                                                                                                                                                                                                                                            09-FEB-1998;
13-APR-1998;
10-AUG-1998;
This sequence represents a human secreted protein of the invention. The extended cDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive identification by DNA sequencing. They may also be used in alternative fingerprint identification techniques. Antibodies against the proteins encoded by the extended cDNAs are useful in identification of tissue types or cell species, as well as identifying tissue specific
                                                                                                                                                Extended specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gene therapy protocols. The nucleic acids encoding signal peptides used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypepti into a cell. The proteins encoded by the EST sequences may be useful treating a variety of human conditions. Secreted proteins have therapeutic value, and the identification of new secreted proteins valuable. AAX42249 to AAX42264 and AAX64644 to AAX64650 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               soluble proteins. The sequences can be used for chromosome mapping and identification of genes associated with hereditary diseases or drug response. Signal sequences from the cDNAs can be used in construction of secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter sequences. Some of the proteins may be useful in diagnosing and treating several disorders including, but not limited to: cancer, hyperlipidaemia, cardiovascular and neurodegenerative disorders, autoimmune diseases, and rheumatic diseases, embryogenic disorders, hypertension, renal injury, amino acidurias, hypoglycaemia, male rat infertility and myopathies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; prostate; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic;
                                                                                                                                                 AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for human secreted proteins expressed in prostate, and encode the proteins given in AAX11716 to AAX11993 respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene
                            products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation and differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone
                                                                                                                                                                                                                                                                                                                                        Claim 34; Page 603; 675pp; English.
                                                                                                                                                                                                                                                                                                                                                                                              New isolated prostate-derived nucleic acids - used to develop products which may have cytokine, immune regulatory, haematop regulating, anti-inflammatory or tumour inhibition activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB;
